Mid-Level Developer

WE ARE TOMMY, ARE YOU?

Are you an intelligent, proactive doer who is proud to contribute to the technical solutions for digital projects from inception through to delivery? Do you love the challenge of tackling new technologies? Do you love to collaborate with others to find the best solution for each unique technical demand?

If so, you might be the best woman or man for this job. We are looking for an experienced developer to join our small but talented team – someone who shares our love for the web and technology, our passion for performance, and our commitment to successful delivery of award-winning projects for the likes of **Paramount Pictures, Amazon Video, Tesco Mobile, Sony Pictures, and Warner Bros.**

RESPONSIBILITIES

As the newest member of our development team, you will be responsible for contributing constructively to the creative technology solutions and the high-quality builds that we deliver for our clients. Our development team is currently comprised of 3 developers working together across several projects with opportunities to rotate on a variety of projects and learn new technologies. We build everything from internal tools and client-facing websites to facebook bots and more.

Our ideal candidate will bring a unique point of view to the work that we do, be keen to learn new technologies and frameworks, look for ways to improve, and have attention to detail. If you are looking for somewhere to blend into the wallpaper and coast by unnoticed, this isn't the company for you.

Daily, you might find yourself:

- Working on creative projects from concept through to final execution
- Developing applications and websites using core web technologies such as JS and Node (no frameworks required) and any other technologies you find right for the task at hand
- Being part of the solution: Developers and Project Managers work together to come up with solutions to the problems
- Building websites meeting clients' requirements working closely with the internal design team
- Performing maintenance of existing project websites
- Working in a team with Senior and Lead Creative developers
- Mentoring and coaching more junior members of the team

SKILLS AND EXPERIENCE

Essential

- A strong portfolio of work on website projects for multiple clients
- Interaction with REST-based APIs
- Advanced knowledge of Javascript
- Development experience with Node JS
- HTML5 and CSS3 skills
- Git (we use Bitbucket)
- Excellent understanding of design methodologies such as responsive web
- Respect for the integrity of design and a desire to work with designers to achieve a high-quality output
- Medium-length experience of developing web-based technology in an agency environment

Desirable

- React and Vue JS skills
- Gulp, ES6, Browserify
- CSS animation engines (Greensock, etc.)
- Three.js
- Pixi.js
- SASS and BEM
- Heroku

What else? We don't expect you to necessarily be familiar with any of these, but if anything in this list piques your interest you are likely to have a chance to work with it: AR Kit, AR Core, VR, AWS, Unity 3D, C#

GET IN TOUCH

If you think you've got the skills, talent, and style to be our new Mid-Level Developer, get in touch with us at work@thisistommy.com. Send your CV and portfolio along with a cover letter email explaining why you are the best person for the job. We do expect an up-to-date portfolio (or github repository) to show previous work and for you to be able to talk through the build process of your previous web projects.

We're committed to furthering equality and diversity in the tech industry, so we'll be especially happy to see applications from underrepresented backgrounds.

Local applicants legally allowed to work in the UK and able to work in our London office only, please. We won't be outsourcing our development work to your company in another country, thank you.

If you're a recruiter, please don't call us. We'll call you.
